

## 74LVXC4245

### 8-Bit Dual Supply Configurable Voltage Interface Transceiver with 3-STATE Outputs

#### General Description

The LVXC4245 is a 24-pin dual-supply, 8-bit configurable voltage interface transceiver suited for PCMCIA and other real time configurable I/O applications. The  $V_{CCA}$  pin accepts a 5V supply level. The "A" Port is a dedicated 5V port. The  $V_{CCB}$  pin accepts a 3V-to-5V supply level. The "B" Port is configured to track the  $V_{CCB}$  supply level respectively. A 5V level on the  $V_{CC}$  pin will configure the I/O pins at a 5V level and a 3V  $V_{CC}$  will configure the I/O pins at a 3V level. This device will allow the  $V_{CCB}$  voltage source pin and I/O pins on the "B" Port to float when  $\overline{OE}$  is HIGH. This feature is necessary to buffer data to and from a PCMCIA socket that permits PCMCIA cards to be inserted and removed during normal operation.

#### Features

- Bidirectional interface between 5V and 3V-to-5V buses
- Control inputs compatible with TTL level
- Outputs source/sink up to 24 mA
- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Implements patented EMI reduction circuitry
- Flexible  $V_{CCB}$  operating range
- Allows B Port and  $V_{CCB}$  to float simultaneously when  $\overline{OE}$  is HIGH
- Functionally compatible with the 74 series 245

#### Ordering Code:

Order Number	Package Number	Package Description
74LVXC4245WM	M24B	24-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300" Wide
74LVXC4245QSC	MQA24	24-Lead Quarter Size Outline Package (QSOP), JEDEC MO-137, 0.150" Wide
74LVXC4245MTC	MTC24	24-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

### Power Up Considerations

To insure the system does not experience unnecessary  $I_{CC}$  current draw, bus contention, or oscillations during power up, the following guidelines should be adhered to (refer to Table 1):

- Power up the control side of the device first. This is the  $V_{CCA}$ .
- $\overline{OE}$  should ramp with or ahead of  $V_{CCA}$ . This will help guard against bus contention.
- The Transmit/Receive control pin ( $T/\overline{R}$ ) should ramp with  $V_{CCA}$ , this will ensure that the A Port data pins are configured as inputs. With  $V_{CCA}$  receiving power first, the A I/O Port should be configured as inputs to help guard against bus contention and oscillations.
- A side data inputs should be driven to a valid logic level. This will prevent excessive current draw.

The above steps will ensure that no bus contention or oscillations, and therefore no excessive current draw occurs during the power up cycling of these devices. These steps will help prevent possible damage to the translator devices and potential damage to other system components.

## Configurable I/O Application for PCMCIA Cards

The LVXC4245 is a 24-pin dual supply device well suited for PCMCIA configurable I/O applications. Ideal for low power notebook designs, the LVXC4245 consumes less than 1 mW of quiescent power in all modes of operation. The LVXC4245 meets all PCMCIA I/O voltage requirements at 5V and 3.3V operation. By tying V<sub>CCB</sub> of the LVXC4245 to the card voltage supply, the PCMCIA card

will always experience rail to rail output swings, maximizing the reliability of the interface.

The V<sub>CCA</sub> pin on the LVXC4245 must always be tied to a 5V power supply. This voltage connection provides internal references needed to account for variations in V<sub>CCB</sub>. When connected as in the block diagram above, the LVXC4245 meets all the voltage and current requirements of the ISA bus standard (IEEE P996).

Fairchild does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied and Fairchild reserves the right at any time without notice to change said circuitry and specifications.

**LIFE SUPPORT POLICY**

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
